

*A two – year Master’s degree Program in “Multidisciplinary Approach of Developmental and Acquired Disorders of Communication” of the Department of Speech & Language Therapy of Technological Educational Institute (T.E.I.) of Epirus.*

Since October 2015, the Department of Speech & Language Therapy of Technological Educational Institute (T.E.I.) of Epirus has launched a Postgraduate Program under the title “Multidisciplinary Approach of Developmental and Acquired Disorders of Communication”.

The purpose of this Program is the multidisciplinary approach of both developmental and acquired communication disorders, diagnosis and treatment.

The Program’s objectives are both the students’ theoretical knowledge enhancement in developmental and acquired communication disorders and other clinical training which is accompanied by practice.

More specific, the project will contribute to the comprehensive training of graduate students in related issues of interest, such as clinical and neurophysiological approach in the diagnosis, and treatment of these disorders, detection and intervention through the early stages, the use of Audiology, psychosocial interventions and the application of specialized techniques in dealing with such disorders and the latest technological developments in their diagnosis and treatment.

Well known scientists and experts from Greece and abroad join our scientific programme and assist students to address research in specialized areas, contributing in building a comprehensive professional identity and independent scientific way of thinking.

The Master's degree duration is four (4) semesters. The first, second and third semesters include lectures and clinical sections in specialized subjects, while the last one practice and dissertation.
